DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, drawn to a circuit for preventing a memory cell from being refreshed in reading mode, classified in class 365, subclass 222.
- II. Claims 25-36, drawn to a method of reading data from a memory cell, classified in class 365, subclass 189.01.
- III. Claims 37-38, drawn to a method of reading data involving a precharging procedure, classified in class 365, subclass 203.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different effects. Specifically, the circuit for preventing the memory cell from being refreshed in reading mode could be used as an isolating circuit in a writing mode of a memory device.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2824

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
